

## Day 02

② Website Design System Architecture  
Customers visit the website to explore furniture sofas, table and related products.

The frontend (Next.js) shows product detail, fetched directly from "Sanity CMS".

When an order is placed, the details are saved in "Sanity CMS" through an API.

Shipment tracking is done using a third party API, giving real-time updates.

Payments are securely processed through a payment gateway and all payment information is stored in Sanity CMS.

### ③ API Details:-

"Endpoint" /Product

Method:- Get

Description:- Retrieve all available furniture from Sanity CMS.
